

Green is Good.

McCoy Workplace Solutions Sustainability Initiative

Our goal is to be a leader in Houston for promoting sustainability and green building practices.

The Need is Now

On average, the construction, maintenance and use of buildings are responsible for 40% of all the energy use in the United States. Couple that with the increasing global concerns over the environmental resources and greenhouse gas emissions and the price is too high to ignore.

WASTE = FOOD

McCoy's Actions:

- 100% recycling of paper, plastic & wood waste
- Partnerships with the leaders in sustainability in their respective industries.
- Tree planting
- Recycled copy paper
- Hybrid vehicle for couriers
- Over \$200,000 in facility improvements to reduce our environmental impact through energy reduction

The tangible benefits to building owners and operators of a comprehensive sustainability program:

- Lower operating costs via reduced energy and water utility bills
- Reduced maintenance and replacement costs due to greater durability of materials
- Improved indoor environmental quality through use of non toxic materials
- Higher productivity, less absenteeism and reduced insurance costs with improved indoor air quality
- Preservation of natural habitats and protections of air and water quality
